

Integrated Device Management

Our device management platform connects and tracks all smart circuit breakers, power data modules, and gateway devices in one place. It shows real-time data on device status, alerts, and circuit details through easy-to-read visuals. The platform also identifies devices automatically and allows for remote setting changes and software updates. This helps to greatly lower maintenance costs.

Features & Advantages

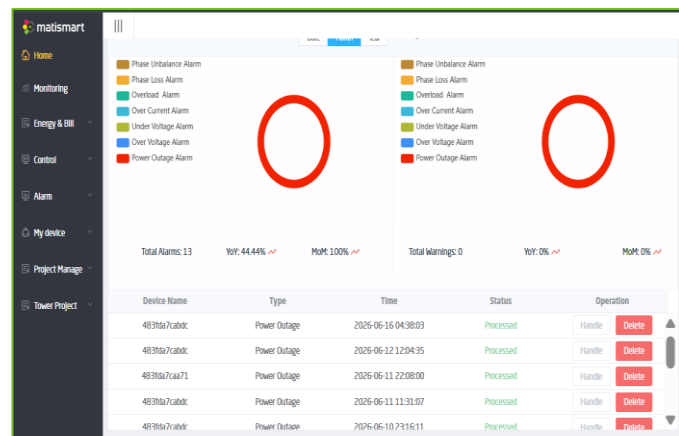

Integrated Device Management

Specifically engineered for Smart Circuit Breaker, our device management platform delivers an all-in-one solution for electrical safety, energy metering, and power management. By using this device management platform,

Real-Time Electrical Parameter Monitoring

Our device management platform provides real time. All collected data following parameters:

- Voltage & Current : Phase and line
- Power Metrics: Active, reactive, and apparent power.
- System Health: Power factor, frequency, and device temperature

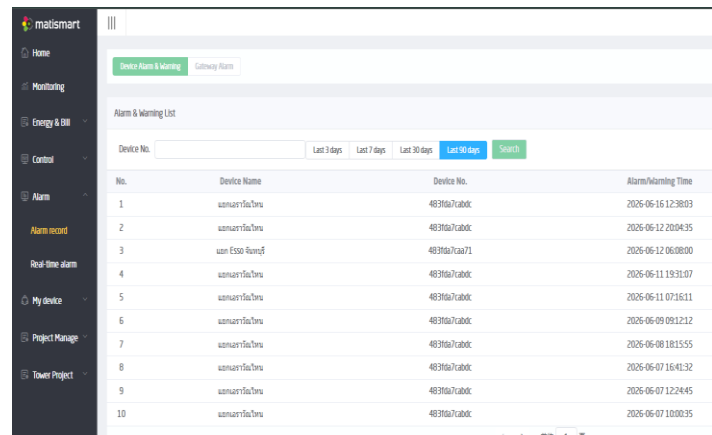

Features & Advantages

Professional Safety & Alarm Monitoring

The platform provides comprehensive electrical safety supervision, including alerts

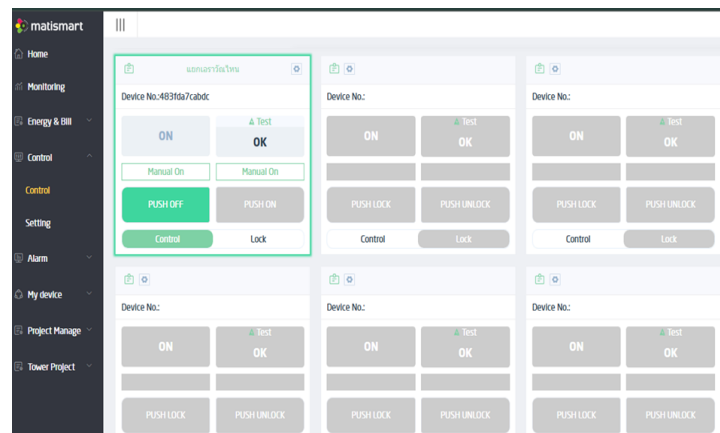

- Voltage & Load: Over-voltage, under-voltage, overload, and over-current.
- System Integrity: Short circuits, arcing faults, and phase or neutral loss.
- Performance & Security: Temperature spikes, imbalance, power loss, and anti-fraud protection.

No.	Device Name	Device No.	Alarm/Warning Time

Remote Control and Scheduling

Using the device management platform, you can perform remote operations such as locking, unlocking, and switching devices. The device management platform also includes a timer function, enabling you to automate device actions based on your specific operational needs.

User friendly and Universal Device support

Using the device management platform, you can perform remote operations via computer and Mobile app an all-in-one solution for electrical safety, energy metering, and power management. By using this device management platform,
